

# ***brevini*** ***service***

Brevini Service is an operational division of Brevini Australia. Organised to provide our customers that little extra reassurance that their decision to buy Brevini is a good one.

We don't stop with the sale of our product, we make sure you get full service and back-up. Our large stock holding in Australia is your assurance that not only can we supply your gearbox ex-stock—we can also back this up, if and when required, with the necessary spare parts.

As a division of the company, Brevini Service has the necessary resources to assure you that your enquiry is taken seriously. We pull out all stops to get your plant operational quickly, should you encounter a breakdown.

We know your gearbox is only a small part of your plant or process. If this breaks down, you can't afford to wait for the repair of your equipment. Your plant's return to operation is our principal goal.

We also aim to keep your maintenance overheads as low as possible and pass the savings on to you.

Finally, our many years of experience in power transmission allows us to help with competitors' products.

Call us NOW to discuss your needs.

## **Total Drive Solutions**

Providing Total Drives Solutions requires a number of resources, not the least of which is engineering and design capability. At Brevini Australia, we design and engineer solutions using electro-mechanical and/or hydraulic planetary and helical gearbox drives. While mainly used in the mining and industrial sectors, these solutions have found applications in construction, earthmoving, utilities, material handling and more.

Our engineers use the latest 3D design and simulation software to work out the requirements and test the designs. We conduct extensive Finite Element Analysis (FEA) on fabrication and machined parts to ensure that we provide the best possible solution to each drive requirement.

Another important resource is our project management capability. Our team of professionals look into every detail of a project, from contract to tender and final commissioning. Thus, we are able to pretty much provide a turn-key service.

Our documentation and engineering drawings are always to the highest project management requirements and done to world's best practice.

Our commitment is not only to provide the best drive solution to do the job, but working with our customer and suppliers, we are able to provide:

***What we say we will, when we say we will, at the agreed price.***

Brevini Australia strives to look at designing and manufacturing innovative drive solutions for our customers, tailored to their specific needs.

Call us NOW to discuss your needs.
